Each year, the Forum builds its themed workshops based on the most up-to-date and emblematic projects in wood and biobased construction, renovation and fittings.

Take the opportunity to build a high-quality programme with us!

All you have to do is fill in the call for projects form regarding a recent project to which you contributed and send it to us as soon as possible.

In preparation for the Forum, we'll be using these projects to create themed workshops that are up-to-date, original and relevant to the realities of construction practices.

You can also send us your suggestions for workshops, particularly those with pedagogical aims.
